THE ALPINA RACING TEAM 09/10

ALPINA racing team is made out of professional winners: the winners of world cups, the Olympic winners, world championship winners and the new generation of the young and upcoming skiers and biathlon racers from all parts of the world. They are all passionately pursuing the same goal: becoming a winner. And rest assured the products of ALPINA are made for that. With their impeccable technical features, innovative mind and restless spirit they are making the impossible coming to life.

WINNING AS A LIFESTYLE

HOW DO YOU KNOW YOU ARE IN A PRESENCE OF A **REAL WINNER**? IS IT SOMETHING ABOUT THE QUALITY OF MOVES? IS IT ABOUT THE DEDICATION AND THE WILLPOWER TO GO ON AFTER EVERYONE ELSE GAVE UP? IS IT THE DETERMINATION TO **REACH THE TOP** AND STAY THERE?

INSULATION

FOREFOOT

The boot's soft forefoot upper is made of various types of material with special properties, such as material thickness, elasticity, structure, water resistance, heat insulation and aesthetic appearance.

STABILIZER

Composite-Carbon made and with profiled surface to assure additional strength. Stabilizer takes asymmetric construction of the plastic heel counter further and highly improves the torsional stability of the shoe sole.

CUFF

Composite-Carbon made and with profiled surface to assure additional strength. Asymmetric construction improves better and stronger lateral support. Upper zone is covered from the inside with the soft plastic cuff which embraces just above the ankle and gives more comfort and better leg support.

OVERBOOT

The overboot covers the shoe completely. Like tight lining, it surrounds the boot from the sole to the top of the upper edge. The single piece overboot is of waterproof elastic material and as such adapts to the various foot shapes and sizes.

HEEL COUNTER CLASSIC

Strong and rigid on it's lower part and soft on it's edges: this multifunctional heel counter accommodates various types of heels, provides strong support, prevents from heel in and out movement and minimizes the take off shoe effect.

LACING CLASSIC

A unique combination of laces and textile hooks provides an easy on and off function. Add a superior pull tightness and precise forefoot to foot control and what you get is a maximum comfort and fit relation.

LACING SKATE

A unique combination of laces and textile hooks provides an easy on and off function. Add a superior pull tightness and precise forefoot to foot control and what you get is a maximum comfort and fit relation.

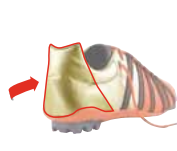

HEEL SKATE

To maximize shoe functional efficiency skate skiing technique demands from the shoe big rigidity, good torsional and lateral stability and strong and firm heel embrace to minimize the take off shoe effect. Skate boot heel pocket is made out of one-piece basic material, which from the outside is supported from plastic heel counter and covered from the inside with a non-slide rubber like lining material.

HEEL COUNTER SKATE

Strong and rigid on it's lower part and soft on it's edges: this multifunctional heel counter accommodates various types of heels, provides strong support, prevents from heel in and out movement and minimizes the take off shoe effect. Heel counter construction is asymmetric, with elevated inside and lowered outside side, resulting in lateral stability and a strong and firm heel embrace.

HEEL CLASSIC

Classic skiing technique demands strong and firm heel embrace. One-piece basic material - from the outside supported with plastic heel counter and from the inside covered with a non-slide material- minimizes the take off shoe effect and maximizes shoe's functional efficiency.

MIDSOLE

The midsole's rear 3D shape maximizes torsional stability and flexion strength, while the midsole front is designed to flex according to the anatomic flexing of the foot during activity.

FOOTBED

The front metatarsal footbed area is specifically shaped to maximize the footbed flexing function and to flex smoothly with the structure of the foot. All the footbed areas where the foot presses hard on the sole consist of a soft foam support inserted into the basic supporting material.

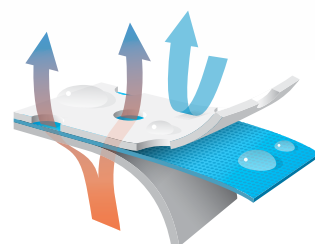

LAST

Sophisticated feet analyses like scanning gave birth to a completely reinvented boot that serves various feet shapes and assures equally great fit to the high, low, wide or narrow feet.

Let all moisture out

Thanks to its unique functional and mechanical properties, the **4dry** membrane prevents water from entering the shoe, while enabling excess moisture from perspiration to evaporate. The membrane has several layers. The uppermost layer, perforated with tiny holes, is waterproof, water repellent and smooth to the touch. Directly beneath it, there is a breathable Sympatex membrane which prevents water from entering the shoe and enables excess moisture to evaporate. The final layer is a protective mesh that protects the membrane from mechanical damage.

**Micro-Perforated
Water Repellent Membrane**
with SympaTex®

4dry
Your new nordic skin

ALPINA SHOES ARE CONSTRUCTED ONE STEP AT A TIME, ONE DETAIL AFTER ANOTHER, **INNOVATION FOLLOWING AN INNOVATION**. ALL OF COURSE, WITH A SPECIAL ATTENTION TO THE BEST POSSIBLE MATERIALS OUT THERE. COMPETITION RANGE INTRODUCES A LONG LIST OF FEATURES, CAREFULLY DESIGNED TO FAITHFULLY SUPPORT ONES PERSONAL QUEST FOR BETTER PERFORMANCE IN GREATER JOY.

THE SINGLE PIECE OVERBOOT

The overboot covers the shoe completely. Like tight lining, it surrounds the boot from the sole to the top of the upper edge. The single piece overboot is of waterproof elastic material and as such adapts to the various foot shapes and sizes.

ELASTIC ADJUSTMENT

An elastic adjustment provides maximum comfort and fit relation over the ankle. gummiband anpassung

CUFF

Cuff made with profiled surface to assure additional strength, better and stronger lateral support. Upper zone embraces just above the ankle and gives more comfort and better leg support.

HEEL GRIP - HEEL REGULATOR

The regulator enables adjustable foot retention. The top of the heel cup can be modified, which results in an optimal fit of the shoe, greater comfort and functional grip of the foot.

HEEL COUNTER

Strong and rigid multifunctional heel counter accommodates various types of heel, provide strong support, prevents from heel in and out movement and minimizes the take of shoe effect. Heel counter highly improves the torsional stability of the shoe sole.

4DRY MEMBRANE WITH SYMPATEX

Thanks to its unique functional and mechanical properties, the 4dry membrane prevents water from entering the shoe, while enabling excess moisture from perspiration to evaporate.

ALPITEX

The top quality Alpitex membrane provides additional protection from snow, water and cold. It allows for a high degree of comfort, even in extreme weather conditions.

THINSULATE INSULATION

Thinsulate insulation guarantees the best conditions for the feet, making them twice as warm as in other linings. It allows the foot to breathe, and provide extra comfort and warmth even on unusually cold or humid days.

LAST

Sophisticated feet analyses like scanning gave birth to a completely reinvented boot last that serves various feet shapes and assures equally great fit to the high, low, wide or narrow feet.

LACING SYSTEM

A unique combination of laces and textile hooks provides an easy on and off function. Add a superior pull tightness and precise forefoot to foot control and what you get is a maximum comfort and fit relation.

THERE ARE TEN THOUSAND WAYS TO BE BETTER.

WE WILL NOT BUILD BY DESTROYING. **promise** WE WILL INNOVATE. **promise** WE WILL NOT MANUFACTURE WITHOUT REDUCING, REUSING, AND RECYCLING. **promise** WE WILL FIND WAYS TO BE CLEANER, MORE ENERGY EFFICIENT, AND MORE SUSTAINABLE. **promise** WE WILL NOT USE RESOURCES TODAY WITHOUT PRESERVING THEM FOR TOMORROW. **promise** WE WILL FOCUS ON QUALITY, RELIABILITY, AND SAFETY. **promise** WE WILL NOT WASTE. **promise** WE WILL PREFER NATURAL, BIODEGRADABLE, AND CHEMICAL-FREE CHOICES. **promise** WE WILL ACT WITH CARE. **promise**

promise

Boots made based on Eco materials and Eco technology with integrated waterproof and breathable membrane.

Comfort wool collar

Wool feels warm, and it's nice to wear boots with a feeling of the past. The boot collar hugs the ankle, is more comfortable, and looks good.

Natural Leather

Durable and flexible material tanned without chrome to reduce the environmental impact and use of polluting chemicals in the tanning process.

Foam Lining

A soft, cushioned foam lining has a really pleasant, cosy feeling.

Insole

Made of chrome-free tanned leather to improve comfort and control the moisture and odour of the shoe.

Laces

Made of cotton and linen, with a rough surface and thus less prone to coming undone.

Recycled midsole and thermoplastic sole

Involves processing used materials into new products to reduce the waste of potentially useful materials, to reduce energy consumption, air and water pollution.

Waterproof, biodegradable and breathable membrane

Waterproof on the outside, but water vapour molecules move through the membrane from the inside to the outside by means of an absorption and evaporation process.

Recycled packaging

Recycling is the process of recovering waste paper and making it into new paper products. Industrialised paper-making has an impact on the environment where raw materials are acquired and processed. Paper recycling reduces this impact.
